

Download Chestnuts Trees Their Seeds

Chestnuts can be harvested from underneath mature chestnut trees after they fall in autumn, usually in late November. Choose nuts that look healthy and plump, without any signs of fungus or rot. Keep in mind that chestnut trees standing on their own will usually produce shriveled seeds that will not germinate because they have not been properly pollinated. I placed the seeds on their side, even if they already were growing the initial root. I placed them in some good draining soil and perlite and covered them with 4-5 cm of soil. Chestnuts are like deep candy, the deer absolutely love them. I am planning on having over 100 chestnut trees as well as other nut trees. So it could become a chestnut orchard as well, time will tell.
