Dental floss (or simply floss) is a cord of thin filaments used to remove food and dental plaque from between teeth in areas a toothbrush is unable to reach. As the build-up of plaque between the teeth is the primary cause of dental disease, such as gingivitis and dental caries, the use of floss is commonly recommended in order to prevent these conditions from developing. STAT!Ref - Resources by discipline. This list is designed to show the Primary discipline a title falls under in STAT!Ref as well as any secondary disciplines that may apply. This dual qualification is regarded as the emerging future of dental care, now incorporating Direct Access (see GDC website) with a holistic approach to treating and preventing the two most common dental diseases – periodontal disease and dental caries. Hygiene is a concept related to cleanliness, health and medicine. It is as well related to personal and professional care practices. In medicine and everyday life settings, hygiene practices are employed as preventative measures to reduce the incidence and spreading of disease.
