The human leg, in the general meaning, is the entire lower limb of the human body, including the foot, thigh and even the hip or gluteal region. However, the definition in human anatomy refers only to the section of the lower limb extending from the knee to the ankle, also known as the crus. Legs are used for standing, and all forms of locomotion including recreational such as dancing, and ...Motor skills are actions that involve the movement of muscles in the body. They are divided into two groups: gross motor skills , which include the larger movements of arms, legs, feet, or the entire body (crawling , running, and jumping); and fine motor skills, which are smaller actions, such as grasping an object between the thumb and a finger or using the lips and tongue to taste objects.

Chapter 10 - Motor system examination. In this chapter we discuss the evaluation of the motor systems, that is the systems involved in generation and control of voluntary and reflex movements.
