transitions and carbon fluxes : global scenarios and policies. [Matti Palo; World Institute for Development  
Economics Research.];]This publication discusses the scenarios and policies on how the deforestation of natural  
forests and the expansion of forest plantations influence the global carbon cycle through emissions and  
sequestration and on consequence how forestry operations impact on the climate, and vice versa.Forest  
transitions and carbon fluxes : global scenarios and policies. edited by Matti Palo ?World development studies,  
15? UNU World Institute for Development Economics Research (UNU/WIDER), c1999, Forest Transitions  
And Carbon Fluxes Global Scenarios And Policies 15 World Development Studies.
